

# Product-Owner Final Project All Deliverables

Written by Brian McCarthy | Landscape PDF | Product-Owner deliverable

| Requirement / Grading Item                 | What Must Be Visible                                                                                                    | Ready Evidence                                                                        |
|--------------------------------------------|-------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|
| Task 1: 01-kanban-board.png/jpeg           | Board columns visible: Product Backlog, Sprint Backlog, In Progress, Review/QA, Done.                                   | Use this PDF as a layout guide before capturing the actual GitHub Project screenshot. |
| Task 2: 02-product-backlog.png/jpeg        | Labels visible on all stories across all non-empty board columns.                                                       | Enhancement labels on REQ-1 through REQ-8; Technical Debt labels on REQ-9 and REQ-10. |
| Task 3: user-story.md URL                  | Repository agile-final-project contains .github/ISSUE_TEMPLATE/user-story.md with proper user story and Gherkin syntax. | Template content is included in this packet.                                          |
| Task 4: 04-labeled-technical-debt.png/jpeg | Stories for requirements 9 and 10 are labeled Technical Debt.                                                           | REQ-9 Cloud Hosting and REQ-10 Deployment Automation marked technical debt.           |
| Task 5: 05-sprint-created.png/jpeg         | Sprint or milestone created with a meaningful title.                                                                    | Milestone title: Sprint - Product Catalog Backend, two-week duration.                 |
| Task 6: 06-estimate-assigned.png/jpeg      | Estimates assigned to stories in In Progress and Done.                                                                  | REQ-1, REQ-2, and REQ-3 have point estimates shown.                                   |
| Task 7: 07-assigned-yourself.png/jpeg      | Active stories assigned to Brian McCarthy.                                                                              | In Progress, Review/QA, and Done stories display Brian McCarthy as assignee.          |
| Task 8: 08-sprint-assigned.png/jpeg        | Sprint or milestone assigned to stories in In Progress and Done.                                                        | REQ-1, REQ-2, and REQ-3 show Sprint milestone.                                        |
| Task 9: 09-burndown-chart.png/jpeg         | Burndown chart exists for the Sprint or Milestone.                                                                      | Example burndown table/chart is included; capture the real chart from GitHub/Zenhub.  |

## Final Project Kanban Board View

| Product Backlog                                                                                                                                                                                                                                                                        | Sprint Backlog                                                                                                                                                                                                                                                                         | In Progress                                                                                                                                                                                                                                                                  | Review/QA | Done                                                                                                                                                                                                                                                                         |

## All User Stories with Labels, Estimates, Milestone, and Acceptance Criteria

| Requirement / Grading Item   | What Must Be Visible                                                                                                                | Ready Evidence                                                                                                                                                                      |
|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| REQ-1 Create Product         | As a catalog manager, I need the ability to create a product in the catalog, so that new products can be sold online.               | Given valid product details, When I submit a create product request, Then the product is saved and receives a unique product ID. Label: enhancement; Estimate: 3; Milestone: Sprint |
| REQ-2 Retrieve Product       | As a shopper, I need the ability to retrieve a product from the catalog, so that I can view accurate product details.               | Given a product exists, When I request the product by ID, Then the API returns the product details. Label: enhancement; Estimate: 2; Milestone: Sprint                              |
| REQ-3 Update Product         | As a catalog manager, I need the ability to update a product in the catalog, so that product information stays current.             | Given a product exists, When I submit valid updated details, Then the catalog stores and returns the updated product. Label: enhancement; Estimate: 3; Milestone: Sprint            |
| REQ-4 Delete Product         | As an administrator, I need the ability to delete a product from the catalog, so that unavailable products are removed from sale.   | Given a product exists, When I submit a delete request, Then the product is removed from the catalog. Label: enhancement; Estimate: 2; Milestone: Sprint                            |
| REQ-5 Like Product           | As a shopper, I need the ability to like a product in the catalog, so that I can express positive interest in it.                   | Given a product exists, When I like the product, Then the product like count increases by one. Label: enhancement; Estimate: 1; Milestone: Sprint                                   |
| REQ-6 Dislike Product        | As a shopper, I need the ability to dislike a product in the catalog, so that I can express negative feedback.                      | Given a product exists, When I dislike the product, Then the product dislike count increases by one. Label: enhancement; Estimate: 1; Milestone: Sprint                             |
| REQ-7 List Products          | As a shopper, I need the ability to list all products in the catalog, so that I can browse available items.                         | Given products exist, When I request the product list, Then the API returns all available products. Label: enhancement; Estimate: 3; Milestone: Backlog                             |
| REQ-8 Query Products         | As a shopper, I need the ability to query a subset of products in the catalog, so that I can find products matching my criteria.    | Given products exist, When I query by category or attribute, Then only matching products are returned. Label: enhancement; Estimate: 5; Milestone: Backlog                          |
| REQ-9 Cloud Hosting          | As an operations stakeholder, I need the catalog hosted in the cloud, so that the application is scalable and accessible.           | Given the service is ready, When it is deployed to the cloud, Then users can access it through the cloud endpoint. Label: technical debt; Estimate: 5; Milestone: Sprint            |
| REQ-10 Deployment Automation | As a development team member, I need automation to deploy new changes to the cloud, so that releases are repeatable and lower risk. | Given new changes are merged, When the deployment workflow runs, Then the cloud environment is updated automatically. Label: technical debt; Estimate: 8; Milestone: Sprint         |
