

TASK 7: Acceptance Criteria for All Six User Stories

Bepha Tools E-Commerce Project

Written by Brian McCarthy

The following acceptance criteria are defined for all six user stories developed in Task 4. All criteria use the Given-When-Then format. Each user story has at least 4 acceptance criteria covering the primary success path, an error/edge case, a boundary condition, and a persistence/email condition.

USER STORY ML-1: Japanese Language Support

Story: As an international customer, I want to view and use the entire Bepha Tools website in Japanese, so that I can browse products, complete checkout, and access support without a language barrier.

AC-1: Full Page Translation

GIVEN I am a customer who selects Japanese (ja-JP) as my preferred language, WHEN I navigate to any page (homepage, product listing, product detail, cart, checkout, order confirmation, support/FAQ), THEN all visible text on that page — including navigation labels, product titles, product descriptions, specifications, button text, placeholder text, error messages, and footer content — is displayed entirely in Japanese, with zero untranslated English strings visible.

AC-2: Language Persistence Across Pages

GIVEN I have selected Japanese as my preferred language and I have added items to my shopping cart, WHEN I navigate away to another page and then return, THEN my language preference remains set to Japanese, my cart contents are unchanged, and all page content is still displayed in Japanese.

AC-3: Japanese Checkout and Order Confirmation

GIVEN I am a customer with Japanese selected and I have items in my cart, WHEN I complete the full checkout process and submit my order, THEN (1) the order confirmation page is displayed entirely in Japanese, AND (2) the order confirmation email sent to my email address is written entirely in Japanese including all line items, pricing, and shipping information.

AC-4: Error Messages in Japanese

GIVEN I am on the payment page with Japanese selected, WHEN I enter an invalid payment detail such as an expired credit card number, THEN the error message is displayed in Japanese — NOT in English — and the message clearly and accurately describes what went wrong and what action I should take.

USER STORY ML-2: Italian Language Support

Story: As an international customer, I want to view and use the entire Bepha Tools website in Italian, so that I can navigate the product catalog and complete purchases comfortably in my native language.

AC-1: Full Site in Italian

GIVEN I select Italian (it-IT) as my language, WHEN I load the Bepha Tools homepage, THEN all navigation menus, promotional banners, product category headings, and all call-to-action buttons are displayed in Italian with grammatically correct Italian text.

AC-2: Product Search Results in Italian

GIVEN I am browsing the site with Italian selected, WHEN I type a product name into the search bar and submit the search, THEN all search results are returned and ALL result labels — including product names, filter category labels, sort option labels, and result count text — are displayed in Italian.

AC-3: Complete Checkout Flow in Italian

GIVEN I have added a product to my cart with Italian selected, WHEN I proceed through all checkout steps (cart review → shipping → payment → order confirmation), THEN every label, instructional text, input field placeholder, button, and status message in the entire checkout flow is displayed in Italian with no English text visible.

AC-4: Italian Character Encoding

GIVEN Italian is selected as the active language, WHEN I view any page that contains Italian text with accented characters (à, è, é, ì, ò, ù), THEN all accented characters render correctly in the browser — no replacement characters (e.g., â€™), broken boxes, or encoding error symbols appear on any page.

USER STORY ML-3: German Language Support

Story: As an international customer, I want to view and use the entire Bepha Tools website in German, so that I can access all product details, checkout flows, and help content in my preferred language.

AC-1: Product Detail Page in German

GIVEN I select German (de-DE) as my language, WHEN I navigate to a product detail page, THEN the product title, full product description, specifications table, availability status label, and all customer review labels (e.g., 'Write a review', 'Verified Purchase') are displayed in German.

AC-2: Product Filter Labels in German

GIVEN German is selected as the active language, WHEN I open the product filter panel on a category or search results page, THEN all filter category labels (Type, Size, Quantity), all individual option values within each filter, and the result count text are displayed in German.

AC-3: Mid-Session Language Switch

GIVEN I am browsing in English and I have 3 items in my shopping cart, WHEN I switch the site language from English to German using the language selector, THEN (1) all visible page content immediately updates to German without a full page reload, (2) my shopping cart still contains all 3 items with the correct quantities, and (3) I am not redirected away from the page I was viewing.

AC-4: Customer Support Content in German

GIVEN German is selected as the active language, WHEN I navigate to the Customer Support or FAQ section of the site, THEN all help articles, the contact form (including all field labels and instructional text), and all customer support instructions are displayed in German.

USER STORY MC-1: South Korean Won (KRW) Currency

Story: As an international customer in South Korea, I want to view all prices and complete checkout in South Korean Won (KRW), so that I can make purchases without needing to manually convert currency amounts.

AC-1: KRW Price Display Format

GIVEN I select South Korean Won (KRW) as my preferred currency, WHEN I view any product listing page or product detail page, THEN every price is displayed with the ₩ symbol, rounded to the nearest whole number (no decimal places), and formatted with comma thousand separators — for example ₩12,500 or ₩1,250,000 — in accordance

with South Korean number formatting conventions.

AC-2: Full Checkout in KRW

GIVEN KRW is my selected currency and I have items in my shopping cart, WHEN I proceed through the complete checkout flow (cart → shipping → payment → confirmation), THEN the cart subtotal, shipping cost, any applicable taxes, and the final order total are all displayed in KRW, and my payment is charged in KRW.

AC-3: Live Exchange Rate Accuracy

GIVEN the currency exchange rate API has been successfully updated within the last 24 hours, WHEN I view product prices in KRW, THEN the displayed KRW prices reflect the most recent exchange rate available from the integrated API.

AC-4: Stale Rate Handling

GIVEN the KRW exchange rate has not been refreshed in more than 24 hours due to an API failure or outage, WHEN I attempt to proceed from the cart to checkout, THEN the system displays a visible warning message telling me that exchange rates are being refreshed, and checkout does not proceed to the payment step until the rate has been successfully updated.

USER STORY MC-2: Indian Rupee (INR) Currency

Story: As an international customer in India, I want to view all prices and pay in Indian Rupees (INR), so that I can purchase tools without worrying about foreign exchange fees or confusion.

AC-1: INR Price Display Format

GIVEN I select Indian Rupee (INR) as my preferred currency, WHEN I browse product listings or product detail pages, THEN prices are displayed with the ₹ symbol using the Indian number formatting system — for example ₹99,999 for values below one lakh, and ₹1,00,000 for values of one lakh and above.

AC-2: Full Checkout in INR

GIVEN INR is selected as my currency and I have added items to my cart, WHEN I complete the checkout process and submit my payment, THEN the payment gateway processes the transaction entirely in INR, no currency conversion is applied at the payment step, and the final order total on the confirmation page matches the INR amount displayed in my cart.

AC-3: Tax Display in INR

GIVEN INR is my selected currency, WHEN I reach the checkout summary page, THEN any applicable taxes are calculated in INR and displayed as a separate line item on the checkout summary in INR — not in a foreign currency.

AC-4: Order Confirmation Email in INR

GIVEN I have successfully completed a purchase with INR selected, WHEN the order confirmation email is sent to me, THEN the email includes: (1) a list of all items purchased with their INR prices, (2) the total INR amount charged to my payment method, and (3) the exchange rate that was applied at the time of purchase.

USER STORY MC-3: Brazilian Real (BRL) Currency

Story: As an international customer in Brazil, I want to view all prices and complete checkout in Brazilian Reals (BRL), so that I can clearly understand the true cost of tools before completing my purchase.

AC-1: BRL Price Display Format

GIVEN I select Brazilian Real (BRL) as my preferred currency, WHEN I view any product on the Bepha Tools site, THEN prices are displayed with the R\$ symbol using Brazilian number formatting conventions — specifically using a period (.) as the thousands separator and a comma (,) as the decimal separator — for example R\$ 1.250,00.

AC-2: Promotional Coupon Applied in BRL

GIVEN BRL is my selected currency and I have entered a valid promotional coupon code at checkout, WHEN the coupon is applied to my order, THEN the discount amount is calculated correctly in BRL and displayed as a negative BRL amount on the checkout summary, and the updated cart total also reflects the discount in BRL.

AC-3: Currency API Unavailability Fallback

GIVEN the currency exchange rate API is temporarily unavailable (server error or network outage), WHEN I attempt to view product prices with BRL selected, THEN the system (1) displays a clear, user-friendly notification that currency pricing data is temporarily unavailable, (2) falls back to displaying prices in USD, and (3) does NOT allow me to proceed to checkout in BRL until the exchange rate API is restored and a valid rate is retrieved.

AC-4: BRL Purchase Receipt

GIVEN I have completed a purchase with BRL selected, WHEN the order confirmation email is sent to my email address, THEN the receipt shows: (1) all purchased items with individual BRL prices, (2) the R\$ total amount charged, (3) any applicable Brazilian taxes displayed in BRL, and (4) the USD-to-BRL exchange rate applied at the time of the transaction.
