

Business Requirements Document (BRD)

Project: HealthFirst Care Operational Efficiency Initiative

Prepared By: Brian McCarthy

Role: Business Analyst

1. Executive Summary

HealthFirst Care Hospital is experiencing operational inefficiencies affecting patient satisfaction and overall service quality. Key issues include long patient wait times, inefficient resource allocation, communication gaps between departments, and scheduling conflicts. This Business Requirements Document outlines the project objectives, business requirements, constraints, acceptance criteria, and data-driven insights required to improve hospital operations.

2. Problem Statement

HealthFirst Care faces increasing patient complaints related to appointment delays, long wait times, resource shortages, and inconsistent communication across departments. Existing scheduling processes are largely manual, leading to double bookings, operational bottlenecks, and reduced patient satisfaction.

3. Business Objectives

- Reduce average patient wait times by at least 20%.
- Optimize hospital resource allocation and utilization.
- Improve communication between departments and stakeholders.
- Reduce scheduling conflicts and appointment overlaps.
- Increase patient satisfaction scores across departments.
- Enable data-driven operational decision-making through reporting dashboards.

4. Stakeholder Analysis

- **Patients:** Require shorter wait times, improved communication, and scheduling transparency.
- **Doctors and Nurses:** Need optimized schedules, resource visibility, and better coordination.
- **Administrative Staff:** Require streamlined scheduling and patient record management.
- **IT Team:** Responsible for implementing automation and maintaining system integration.
- **Hospital Executives:** Require operational insights, KPI dashboards, and performance tracking.

5. Business Requirements

- Automate appointment scheduling and reduce double bookings.
- Implement centralized scheduling and communication workflows.
- Provide dashboard reporting for operational KPIs.
- Improve resource allocation tracking and forecasting.

- Enable automated notifications for patients and staff.
- Improve inter-department communication and escalation procedures.

6. Constraints

- Budget limitations for system upgrades and implementation.
- Dependence on legacy hospital management systems.
- Limited staff availability for training during rollout.
- Compliance requirements related to patient privacy and healthcare regulations.

7. Acceptance Criteria

- Reduce average patient wait times by 20% within six months.
- Reduce scheduling conflicts by 30%.
- Increase patient satisfaction scores by 15%.
- Provide operational dashboards with real-time reporting capabilities.
- Achieve successful integration with existing hospital systems.

8. Data Analysis Findings

8.1 Appointment Scheduling Analysis

Analysis of appointment scheduling data identified peak appointment periods and department-level scheduling congestion. General Medicine and Cardiology experienced the highest scheduling loads.

8.2 Patient Feedback Analysis

Patient feedback trends showed dissatisfaction linked to appointment delays and communication gaps. Departments with higher wait times showed lower average feedback scores.

8.3 Resource Utilization Analysis

Resource utilization analysis identified uneven equipment and staffing allocation across departments, contributing to operational inefficiencies and patient delays.

9. Recommendations

- Implement automated scheduling and queue management systems.
- Deploy centralized operational dashboards for leadership visibility.
- Standardize communication workflows across departments.
- Introduce predictive resource allocation and staffing planning.
- Conduct staff training sessions on updated workflows and systems.

10. Conclusion

The HealthFirst Care operational improvement initiative provides a structured approach for addressing patient wait times, resource inefficiencies, and communication gaps. Data analysis supports the need for automation, operational dashboards, and standardized workflows. The proposed business requirements and recommendations align with the hospital's strategic objective of improving patient experience and operational efficiency.
