

Requirements Traceability Matrix (RTM)

Project: HealthFirst Care Operational Efficiency Initiative

Prepared By: Brian McCarthy

Role: Business Analyst

1. Introduction

The Requirements Traceability Matrix (RTM) ensures that all business requirements for the HealthFirst Care initiative are mapped to stakeholder needs, project objectives, and supporting data analysis. The RTM improves visibility, prioritization, and project traceability.

2. Requirement Classification

Requirements were categorized into Functional Requirements (FR) and Non-Functional Requirements (NFR). The MoSCoW prioritization method was applied to identify Must Have, Should Have, Could Have, and Won't Have requirements.

3. Requirements Traceability Matrix

Requirement ID	Requirement Description	Priority (MoSCoW)	Stakeholder(s)	Project Objective	Related Data File	Status
FR-001	Automate appointment scheduling and reduce double bookings	Must Have	Patients, Administrative Staff	Reduce patient wait times	appointment_data.csv	Approved
FR-002	Provide automated appointment notifications and reminders	Should Have	Patients, Administrative Staff	Improve patient communication	feedback_data.csv	Approved
FR-003	Optimize resource allocation across departments	Must Have	Doctors, Nurses, Executives	Improve resource utilization	resource_data.csv	Approved
FR-004	Implement operational dashboard	Could Have	Executives, IT Team	Enable data-driven decisions	resource_data.csv	In Progress

	reporting					
FR-005	Improve interdepartmental communication workflows	Should Have	Doctors, Nurses, Administrative Staff	Reduce communication gaps	feedback_data.csv	Approved
NFR-001	Ensure HIPAA-compliant patient data handling	Must Have	IT Team, Executives	Maintain regulatory compliance	N/A	Approved
NFR-002	System should support scalable appointment growth	Should Have	IT Team	Support future operational growth	appointment_data.csv	Planned
NFR-003	Provide dashboard response times under 3 seconds	Could Have	Executives, IT Team	Improve usability and performance	resource_data.csv	Planned

4. Data Analysis Findings

4.1 Appointment Scheduling Analysis

Appointment scheduling analysis identified peak congestion within General Medicine and Cardiology. The findings support the requirement for automated scheduling and queue management.

4.2 Patient Feedback Analysis

Patient feedback highlighted dissatisfaction caused by delays and poor communication. These insights justify requirements related to automated notifications and communication improvements.

4.3 Resource Utilization Analysis

Resource utilization analysis identified uneven staff and equipment usage patterns. The findings support the need for improved resource optimization and operational dashboards.

5. RTM Validation Checklist

- All business requirements from the BRD are mapped in the RTM.
- Requirements are categorized as Functional or Non-Functional.
- MoSCoW prioritization has been applied to all requirements.
- Stakeholder alignment has been confirmed.
- Requirements are linked to project objectives and supporting data evidence.
- Requirement status tracking has been completed.

6. Conclusion

The RTM provides comprehensive traceability between stakeholder needs, business objectives, and operational data analysis for the HealthFirst Care initiative. The matrix ensures project alignment, supports prioritization, and improves visibility into project deliverables and outcomes.
