

Capstone Project - Dashboard Insights Report

This report summarizes the dashboard design, visualizations, and operational insights developed for HealthFirst Care. The dashboard supports data-driven decision-making by highlighting patient wait times, resource utilization, department performance, and patient satisfaction trends.

Datasets and Variables Used

Dataset	Key Variables
Cleaned_Appointments	AppointmentID, Department, Appointment Date, Time, Status
Cleaned_Feedback	Feedback Score, Comments, Wait Time, Satisfaction Level
Cleaned_Resources	Resource Type, Department, Usage Hours, Availability

Dashboard Design Process

Section 1 focused on operational KPIs and wait time monitoring.
Section 2 visualized resource utilization and departmental bottlenecks.
Section 3 highlighted patient satisfaction trends and feedback insights.
Interactive filtering concepts were included for departments and operational metrics.
Visualizations were selected to support executive-level decision-making.

Line Chart - Wait Time Trends

This line chart highlights average patient wait times across departments.

Bar Chart - Resource Utilization

This bar chart identifies departments with high and low resource usage.

Heatmap - Department Performance

The heatmap identifies bottlenecks and operational inefficiencies across departments.

Pie Chart - Satisfaction Levels

The pie chart visualizes patient satisfaction levels categorized as High and Low.

Key Findings and Business Implications

Departments with longer wait times demonstrated lower patient satisfaction scores.
Resource utilization patterns identified overburdened operational areas during peak periods.
Automated dashboards improve visibility into operational KPIs and stakeholder performance.
Operational bottlenecks can be reduced through scheduling optimization and predictive planning.
Dashboard-driven reporting supports leadership decision-making and process improvement initiatives.
