

Product Manager EOL Requirements - Center City Gazette

Written by Brian McCarthy

Ten EOL requirements: internal and external impacts

Requirement type	EOL requirement for The Center City Gazette	Rationale / impact
Internal	Workforce transition plan for 17 full-time staff plus part-time reporters and advertising sales support.	Employees need role clarity, redeployment options, severance planning, knowledge transfer, and morale support during a two-year phase-out.
Internal	Editorial and publishing operations roadmap.	The Gazette must decide which print days, page counts, sections, and production workflows remain during the transition.
Internal	Printing equipment and facility plan.	Management must determine whether to sell, lease, repurpose, or maintain printing capacity for flyers, value packs, and contract print work.
Internal	Financial cost-benefit analysis and approval gates.	The EOL plan must compare print losses, advertising decline, contract printing margin, website investment, and shutdown costs.
Internal	Legal, HR, vendor, and records management review.	Contracts, employment obligations, subscriber records, advertiser agreements, and archival responsibilities must be managed properly.
External	Subscriber communication and migration plan.	Subscribers need notice, refund/credit policies, delivery changes, digital alternatives, and customer service support.
External	Advertiser and commercial printing customer plan.	Advertisers need replacement options for flyers, value packs, contract printing, and digital advertising packages.
External	Distribution center and driver transition plan.	Three distribution centers and per-paper drivers need contract timelines, volume forecasts, and wind-down terms.
External	Retail outlet and grocery store sales plan.	Retail partners need notice of final sale dates, return policies, and alternative distribution arrangements.
External	Community and public-relations plan.	A newspaper founded in 1926 has civic significance; the Gazette should explain the change, preserve archives, and describe any future digital/community news model.
