

# Final Project Worksheet - Elevate Eats

Completed product concept, requirements, roadmap, image prompts, and comparison notes

## Elevate Eats - AI Nutrition and Wellness Platform

### Task 1: Product Concept

#### Prompt used

Develop a product concept for Elevate Eats, an AI-driven platform that integrates technology, nutrition, and wellness. Include target markets, competitive landscape, costs, commercialization strategy, and a value proposition.

| Entry                        | Completed Analysis                                                                                                                                                                                                                                                                                                           |
|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Target markets               | Health-conscious consumers; fitness and wellness users; people with dietary restrictions such as gluten-free, vegan, keto, diabetic-friendly, low-sodium, or allergy-sensitive needs; busy professionals and families needing convenient healthy meals; tech-savvy users already using apps, wearables, or health trackers.  |
| Competitive landscape        | Recipe apps, calorie trackers, meal-planning services, grocery retailer apps, nutrition coaching platforms, and emerging AI wellness tools. Elevate Eats can differentiate by combining recipe recommendations, health metric integration, personalization, shopping support, and continuous feedback loops in one platform. |
| Costs to consider            | AI platform and mobile app development; recipe and nutrition database licensing; health-data privacy, security, and compliance controls; UX design; cloud hosting; customer support; marketing; partnerships with grocery, fitness, and health providers; ongoing model monitoring and data governance.                      |
| Commercialization strategies | Freemium app with premium subscription tiers; partnerships with grocery stores and fitness centers; employer wellness packages; affiliate grocery ordering; sponsored but clearly labeled healthy product placements; dietitian or coach add-ons; enterprise partnerships with healthcare or wellness providers.             |
| Value proposition            | Elevate Eats makes healthy eating easier by using AI to recommend personalized recipes and meal plans aligned with each user's health goals, dietary needs, and preferences, while reducing meal-planning friction and supporting better daily wellness decisions.                                                           |

### Task 2: Prioritized Product Requirements

#### Prompt used

Prioritize the most important product features for Elevate Eats and explain why each matters to launch success.

| Priority | Feature                                    | Rationale                                                                                                |
|----------|--------------------------------------------|----------------------------------------------------------------------------------------------------------|
| 1        | Personalized AI recipe recommendations     | Core value driver; recommendations must match goals, allergies, preferences, budget, and available time. |
| 2        | Dietary restriction and allergy filters    | Safety-critical and necessary for trust across users with medical or lifestyle restrictions.             |
| 3        | Health metric integration                  | Connects meals to user goals through wearables, nutrition logs, and health app data.                     |
| 4        | Meal planning and nutrition targets        | Turns recommendations into weekly routines with calories, macros, ingredients, and preparation time.     |
| 5        | Smart grocery list                         | Converts meal plans into actionable shopping lists and enables grocery partnerships.                     |
| 6        | Progress tracking and feedback loop        | Improves personalization over time and helps users see outcomes.                                         |
| 7        | Cooking mode with timers and substitutions | Improves usability during real meal preparation.                                                         |

| Priority | Feature                      | Rationale                                    |
|----------|------------------------------|----------------------------------------------|
| 8        | Community and recipe sharing | Supports engagement after the MVP is stable. |

### Task 3: Four-Quarter Product Roadmap

Prompt used

Create a one-year product roadmap for Elevate Eats in four quarters, showing goals, features, and milestones.

| Quarter | Goals                                          | Features                                                                                                            | Milestones                                                                                          |
|---------|------------------------------------------------|---------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|
| Q1      | Establish foundation and validate market need. | Market research, personas, app wireframes, nutrition data model, AI recommendation prototype, privacy requirements. | Concept approved; MVP requirements baselined; prototype recommendation engine demonstrated.         |
| Q2      | Build MVP and begin controlled testing.        | Recipe recommendations, dietary filters, user profile setup, basic meal planning, feedback capture.                 | MVP released to beta users; initial usability results collected; top issues prioritized.            |
| Q3      | Expand personalization and integrations.       | Wearable/health app integration, grocery list, nutrition dashboard, substitution engine, improved AI feedback loop. | Partner pilots started; recommendation accuracy and engagement metrics improved.                    |
| Q4      | Prepare for commercial launch.                 | Premium tier, community features, cooking mode, launch analytics, onboarding, support workflows.                    | Launch readiness review completed; marketing campaign launched; first commercial release available. |

### Task 4A: DALL-E 3 Marketing Image Prompt - Happy Customers

Create an image of one or two happy, healthy adults using the Elevate Eats mobile app in a bright modern kitchen. Show colorful healthy meals, a visible phone screen with personalized recipe recommendations, and a positive wellness-focused mood. Use realistic commercial photography style, clean lighting, inclusive customers, and no unreadable text on the screen.

### Task 4B: DALL-E 3 Packaging Recommendation Prompt

Create packaging concepts for Elevate Eats as a premium digital wellness and meal-planning product. Show a modern starter kit box with clean blue-green branding, recipe cards, QR code-style app onboarding card, and fresh ingredient imagery. Emphasize health, personalization, and simplicity. Realistic product packaging mockup on a white kitchen counter.

### Task 5 and Task 6: Comparison Notes

A peer review would likely validate that the analysis covers the required business dimensions, but may suggest clearer monetization assumptions and stronger privacy controls. Compared with the provided potential solution, this version aligns on target markets, competitive landscape, core costs, subscriptions, partnerships, personalized nutrition, and a quarterly roadmap, while adding stronger governance, grocery partnerships, and beta-readiness details.
